Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submitter. This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

* NOTE: This is a 'working draft' sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             24;

(see http://www.lbgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

NOTE: This is a 'working draft' sequence. It currently
consists of 54 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.

This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                                                                                                                                                       as soon as it is available and the accession number be preserved.

e.g. Novel human disease detection and treatment polypeptide, useful in diagnosis, prevention or treatment of cell proliferative disorders e.g. arteriosclerosis, cirrhosis and an autoimmune/inflammatory disorder

Claim Page 414; 618pp; English.

The invention relates to an isolated human disease detection and treatment (MDDT) polypeptide (I) selected from a polypeptide having a sequence selected from 254 sequences (ABP51231-ABP51484) given in the specification, a naturally occurring polypeptide comprising a sequence having at least 90% identity to (I) or a biologically active or immunogenic fragment of (I). (I) is useful for screening a compound for effectiveness as an agonist or antagonist, for screening a compound that specifically binds (I) or modulates the activity of (I), and for preparing a polycional or monoclonal antibody by hybridoma technology. Nucleic acids (II) (ABQ72449-ABQ72700) encoding (I) are useful for expression of a target for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cc detecting MDDT in a sample or for assessing toxicity of a test compound, ci in a diagnostic test for a condition or a disease associated with the cexpression of MDDT in a biological sample, for detecting (I) in a sample, cand for purifying (I) from a sample. For detecting (I) in a sample, cand for purifying (I) from a sample. A composition comprising (I), an associated with decreased or increased expression of functional MDDT. (C (I) or (II) are useful for diagnosing, treating or preventing disorders associated with aberrant expression of MDDT, where the disorders are selected from a cell proliferative disorder such as arteriosclerosis, carbonish, hepatitits, psoriasis, and cancer and an autoimmune/inflammatory disorder such as AIDS, Addison's disease, callergy, anaemia, asthma, atherosclerosis, gout, multiple sclerosis or rheumatoid arthritis. (II) are useful for creating knockin humanised animals or transgenic animals to model human diseases, in somatic or germline gene therapy, to generate a transcript image of a tissue or cell type, for detecting differences in the chromosomal location due to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 08 - NOV - 80

                                                                                                                                                                                          CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (1) CC amino acid sequences given in AAM82170 to AAM91921. (1) have cytostatic CC activity, and can be used in gene therapy and vaccine production. (1) CC proteins and polynucleotides may be used in the prevention, diagnosis and CC treatment of diseases associated with inappropriate (1) expression. For CC example, they may be used to treat disorders associated with decreased CC expression by rectifying mutations or deletions in a patient's genome CC that affect the activity of (1) by expressing inactive proteins or to CC supplement the patients own production of (1). Additionally, (1) CC polynucleotides may be used to produce the secreted (1), by inserting CC the nucleic acids into a host cell and culturing the cell to express the CC protein. (1) proteins and polynucleotides may be used to prevent, CC cancers and treat immune/haematopoietic-related diseases, especially CC cancers and cancer metastases of haematopoietic acitigen genomic concerns the present human immune/haematopoietic antigen genomic concerns the present invention. AAK54942 to AAK54950 and AAM82169 crepresent sequences used in the exemplification of the present invention.

CC (referred to as open reading frame, ORFX, where X is 1-1149] (see Table 1 cin the specification). ABN15762 to ABN27252 encode the human ORFX proteins given in ABP00010 to ABP1500. ORFX proteins are useful for treating or preventing a pathology associated with an ORFX-associated cd disorder in humans, and in the manufacture of a medicament for treating a CC syndrome associated with ORFX-associated disorder. ORFX polynucleotide sequences can be used in the treatment of cancer, hyperproliferative disorders, cirrhosis of liver, corporatesis, benign tumours, keloid, degenerative disorders related to organ contensis, hearign tumours, keloid, degenerative disorders related to organ contensis, hearign tumours and the disorders, disorders follets, systemic contensish benign tumours desease, diabetes mellitus, systemic contensish hyperthematosus, hypertension, hypothyroidism, cholesterol ester contension autoimmune deficiencies and disorders, infectious contensish autoimmune thyroiditis, myasthenia gravis, graft-versus-host disease and autoimmune inflammatory eye disease. ORFX proteins are also conseill for treating burns, incisions, ulcers, for treating osteoporosis,

                                                                                                                                                                     The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopolesis regulating

                                                                                                                                                 The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemmia, nervous system disorders, arthritis and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (antipagonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital:
                                                                                                                                                                                                                                                                                                                                                           Fatty

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         encoding the proteins are provided. The FATP proteins can be produced by standard recombinant methodology. Fatty acid uptake by cells can be modulated by modulated by modulating biosynthesis of FATP proteins especially FATP6. In particular, antisense oligonucleotides can be used to modulate FATP biosynthesis. Modulation of FATP6 is useful for inhibiting fatty acid uptake in cardiac muscle of humans. Agents can be directed to cardiac muscle or liver by administration of a complex of the agent and a FATP6 binding moiety. DNA encoding FATP proteins can be used as a reference used in detecting variant alleles or homologues. Altering the LCFA uptake by administering an inhibitor or enhancer of FATP transport function in the small intestine can decrease or increase calories available as fats, and can decrease or increase circulating fatty acids. Blocking the function of FATP4 and also FATP2, is useful for treating obesity,

expression of two or more genes represented in ABN93503-ABN97455 in a tissue sample. The method of the invention has hepatotropic, and cytostatic activity. The method is useful for diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma and metastatic

carcinoma in a patient.

The method is

useful

identifying

progression of liver cancer, hepatocellular carcinoma or metastatic tumour in a patient, and differentiating metastatic liver cancer from hepatocellular carcinoma in a patient, involving detecting the level

The invention relates to a novel method for diagnosing

and

detecting the

from of

Claim

1; SEQ ID NO 2006; 298pp; English

Diagnosing and detecting the progression of liver cancer, hepatocellular carcinoma or metastatic liver tumor in a patient, involves detecting the level of expression of two or more genes liver tissue sample

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention provides the protein and coding sequences of fatty acid transport proteins (FATPS) from a number of species, including FATP1, FATP2, FATP3, FATP4, FATP5 and FATP6 from the human, FATP1-FATP5 from the mouse, FATPa and b from C. elegans, and FATP from Aspergillus nidulans, Drosophila, zebrafish, Magnaporthe grisea, Mycobacterium tuberculosis and Cochliobolus heterostrophus. The FATP from M. tuberculosis can be used to identify inhibitors which can then be used to treat TB. That from M. grisea (also known as rice blast fungus) can be used to develop anti-fungal agents capable of preventing infection of rice. Those from the human can be used to develop treatments for diabetes, heart disease, obesity, hyperlipidaemia and weight control. The present sequence is one of the sequences described in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                          Gene; liver cancer; ds; hepatocellular carcinoma; hepatotropic; metastatic liver tumour; cytostatic; expression profile; disease state; disease progression; drug toxicity; drug efficacy; drug metabolism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          2433

        The invention relates to a method of diagnosing (I) the onset or C progression of benign prostatic hyperplasia (BPH), or screening (II) for C progression of benign prostatic hyperplasia (BPH), or screening (II) for C ridentifying an agent that modulates the onset or progression of BPH.

The method is based on changes in gene expression in BPH tissue isolated from patients exhibiting different clinical states of prostate isolated the prostate set of prostate cells of the subject that are differentially regulated compared to normal prostate tissue. (II) comprises from the subject that are differentially regulated compared to normal prostate cells. (II) comprises preparing a first gene expression profile of BPH cells or BPH-like cell population, exposing the cells to the agent, preparing a second gene expression profiles cells, and comparing the first and second gene expression profiles. (II) is useful for diagnosing the onset or progression of BPH. (II) is useful for identifying an agent that modulates the onset or progression of BPH. The methods are useful to present information identifying the clevel of genes given in the specification in the tissue or cells to the topic of expression of gene in the database and displaying the conset.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

Agents using (II) are useful treating BPH or prostate cancer. ABK64106-ABK64860 represent human benign prostatic hyperplasia gene sequences of the invention.

                                     The present invention relates to the isolation of novel human connective tissue related polypeptides (AAU86435-AAU86923) and the polynucleotide (cDNA and genomic) sequences encoding them. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of diseases associated with connective tissue(s), including cancer. The polynucleotide sequences of the invention are also useful in gene therapy. ABK42102-ABK43116 represent genomic sequences encoding the novel human connective tissue related polypeptides.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                        Rosen
                                                                                                                                                                                                                                                                                                                                  ( HUMA - )

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DB DB
